

FAIRE & SAVOIR FAIRE

FROM LAB TO PLANT |

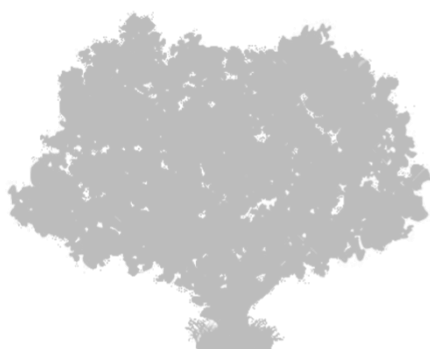

Since 2015, EXTRACTHIVE has developed industrial waste treatment solutions.

For this, we are able to support our customers and our partners from laboratory test to industrial demonstration (in-situ campaign, several weeks test).

We mainly aim waste with high value or strong environmental footprint.

SIMPLE SOLUTIONS FOR COMPLEX WASTE

Daily, our customers and partners have to optimize or treat the waste they are responsible for.

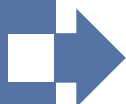

By calling in EXTRACTHIVE's know-how, they ensure themselves to find an adapted solution to their issues (treatment, stabilization, valorization, concentration, etc.)

To face economical and legal expectations, our engineers develop simple solutions. These solutions are designed for a quick industrialization and generally need a low investment level.

Dangerous waste

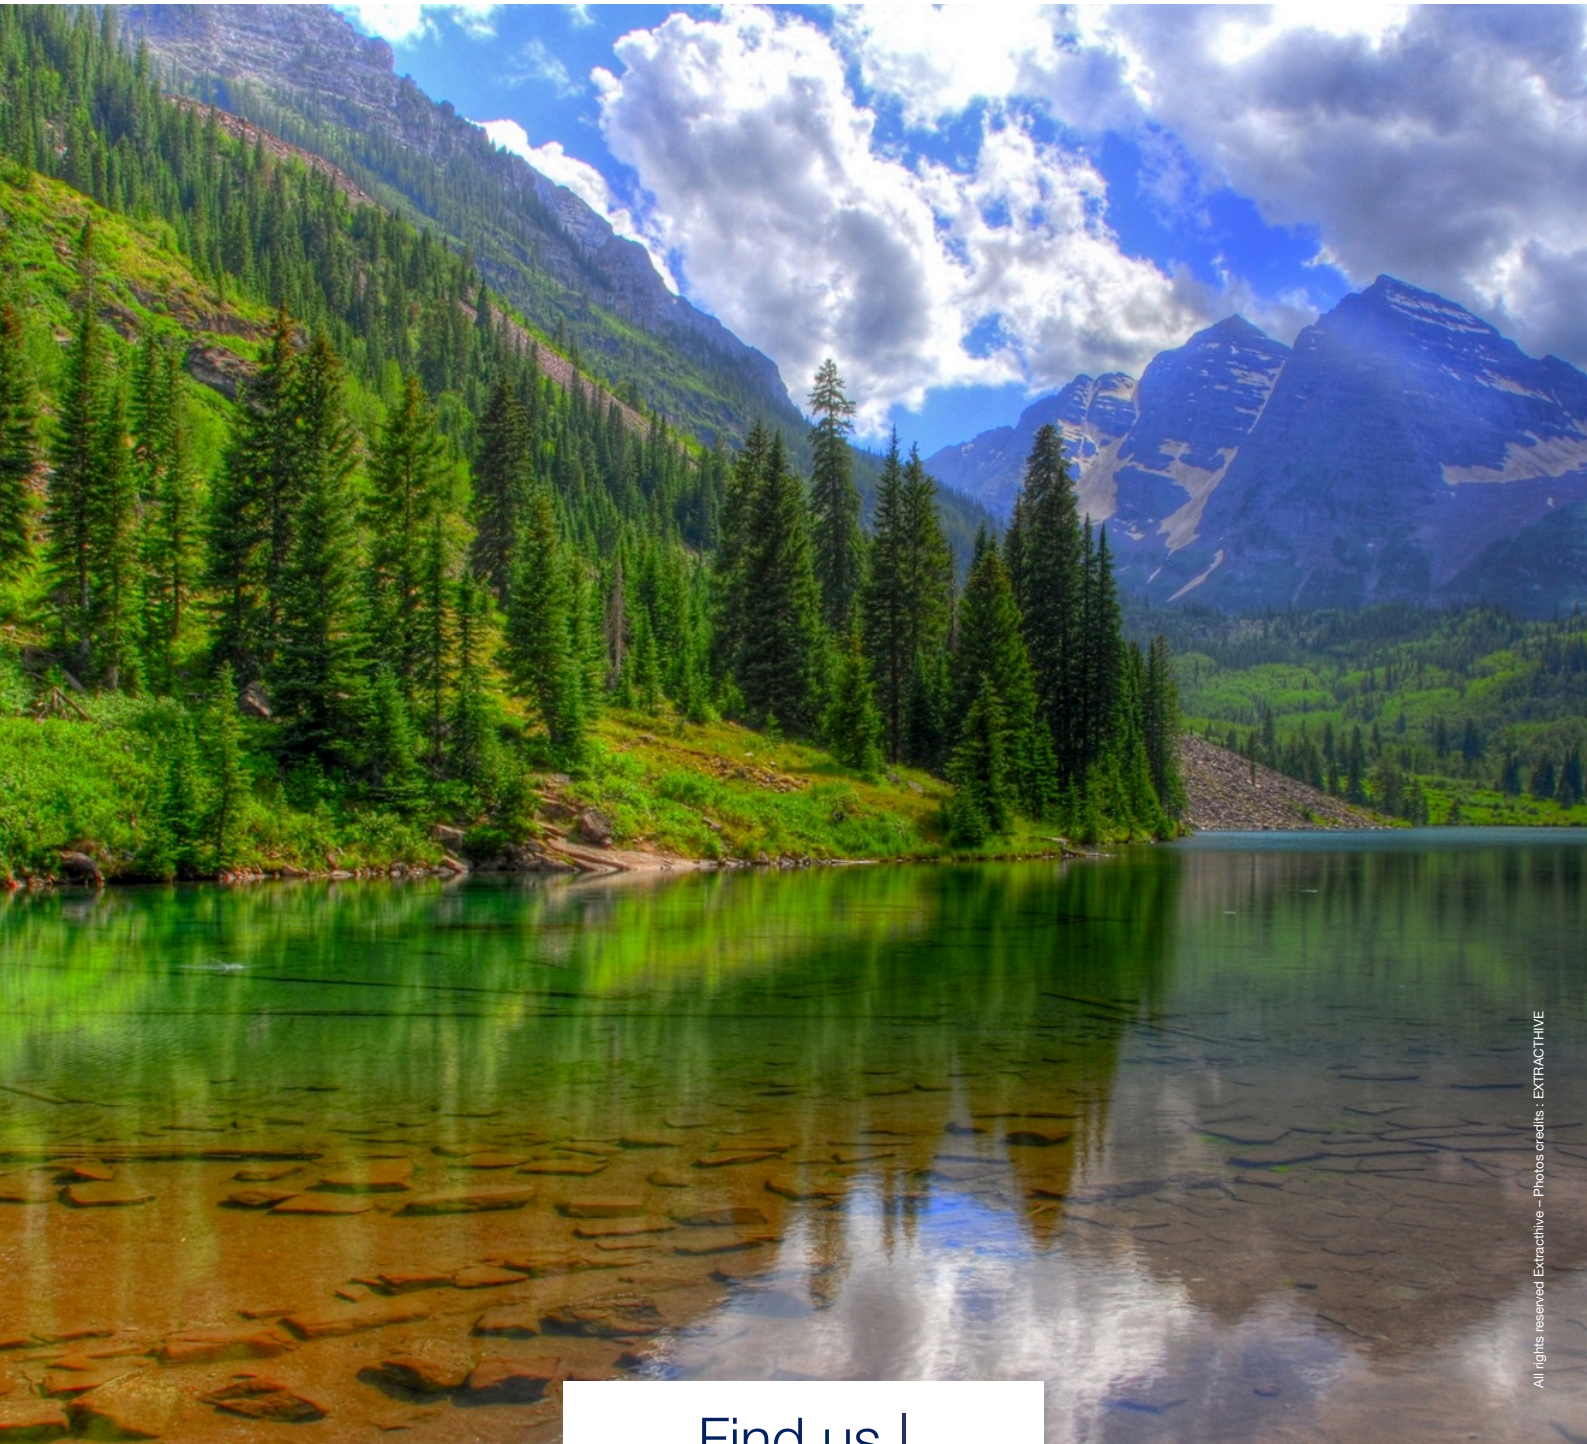

RECYCLE DIFFERENTLY |

Considering the environmental and social issues with which industry is currently confronted, EXTRACTIVE chose to provide the knowledge of its team to any industrial operator wishing to recycle and/or valorize its waste.

The women and men working at EXTRACTIVE believe in values that allow conceiving processes and technologies which are adapted to each problem, but also building the ecosystem in which the waste will be valorized, working together with our customer.

We thus favour local distribution channels for recycling and try to maximize the number of opportunities for part-exchange and valorization by other companies working in the treated waste industry.
